Next Week: Earth Day 2021

Mini Fact:

The Green Bank Telescope's dish is about 300 feet across, about the length of a football

Our universe is full of wonders. Among them are the amazing electromagnetic (e-LECtro-mag-NEH-tic) waves.

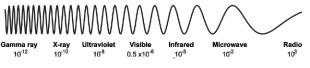

These occur when electricity and magnetism interact to carry energy through

Just about everything in the universe gives off these waves in all directions. They are all around us. So humans and objects on Earth and in space are natural sources of these electromagnetic waves.

Making waves

Through the years, scientists have discovered how we can make these invisible electromagnetic waves work for us.

Scientists found that waves of different lengths do different things. Different wavelengths have different frequencies.

The light and colors that we see are made by electromagnetic waves.

When the waves are very close together, they have a high frequency.

When they are far apart, they have a low frequency.

X-ray waves

If we make the wavelengths very close together with a very high frequency, we can make X-ray pictures that doctors use to see what's going on inside our bodies.

Microwaves

If we make a wavelength longer, we can make the waves that cook our food in microwave ovens.

Radio waves

The longest waves of all are radio waves. While we call them "radio" waves, they are also used for TV and cellphones and other ways to communicate.

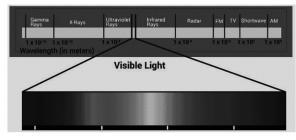

For radios to work, you need a transmitter, broadcasting antenna, receiving antenna and receiver. The transmitter generates, or creates, the radio signal. The radio waves are sent out into the world. An antenna picks up the signal and passes it to the receiver.

Our cellphones use RF waves, or radio frequency waves, that are on the spectrum between microwaves and FM radio waves.

Visible waves

The visible part of the electromagnetic wave spectrum creates the waves we see as colors.

Looking beyond Earth

What's way out there in the universe? Scientists use radio waves to find out.

Of all the different types of electromagnetic waves, radio waves are the longest. Radio waves are silent. Scientists don't listen to them; they study them.

Green Bank Telescope

In the mountains of West Virginia is the largest

telescope in the world. The GBT's job is to collect naturally occurring radio waves.

By studying

them,

movable radio

scientists can find out what is going on way out in space.

Space is filled with radio wave energy. Planets, stars, galaxies and even clouds of dust and gas give off radio waves that can be detected on Earth. The telescope collects radio waves. It can only receive them; it does not send any. It takes a long time for some of the waves to reach Earth. Some of them might be millions of years old before they do.

open a door with?

Try 'n' Find

Words that remind us of electromagnetic waves are hidden in this puzzle. Some words are hidden backward, and some letters are used twice. See if you can find:

Cook's Corner

• 2 cups miniature marshmallows

Fancy Fudge

• 1 1/2 cups sugar

• 1 tablespoon butter

through cooking.

about 16 pieces.

• 1/2 cup evaporated milk

You'll need:

What to do:

JANTENNACH REVIECERVYXALA SLOWAFREQUENCYO SPECTRUMJVW AWOR ELE Ε ZEYFOV SIBLEL C T S C IENCERA Т A T RANSMITTERP Q W

• 1 (12-ounce) package

chips

1. Place sugar, butter and evaporated milk in a medium, microwave-safe bowl.

Microwave 2 minutes or until smooth. Stir halfway through cooking.

3. Remove from oven. Stir in pecans and vanilla. Mix well.

Microwave on high for 4 to 6 minutes, or until mixture comes to a boil. Stir halfway

4. Spread mixture evenly in a greased 8-by-8-inch pan. Cool and cut into squares. Makes

2. Remove from microwave and stir in marshmallows and chocolate chips. Mix well.

semisweet chocolate

• 1 cup pecans, chopped

• 1 teaspoon vanilla

Tanya: What's the

Tyne: A piano key!

Researchers have found that pigs can be trained to play video games, using only their snouts to manipulate a joystick in front of a computer monitor. Scientists at Pennsylvania State University tested two Yorkshire pigs named Hamlet and Omelette, and two Panepinto micro pigs, Ebony and Ivory. The highly intelligent swine plowed through levels of difficulty to excel at the game. But Hamlet and Omelette were forced to retire after 12 weeks because "they had grown too large to stand long enough to complete sessions."
